

CrimeSight Phase 2: Visual Prototypes

Team Name / Your Name

February 16, 2026

Complex Visualization Components

Below are the screenshots of the technically challenging components implemented for Phase 2.

(a) **Geographic Symbol Map:** Proportional symbols on an India basemap showing crime hotspots.

(b) **Temporal Heatmap:** 7 × 24 grid analyzing crime frequency by weekday and hour.

Figure 1: **Spatial & Temporal Analysis Views.** These coordinated views allow users to filter crime data by location (left) and time (right).

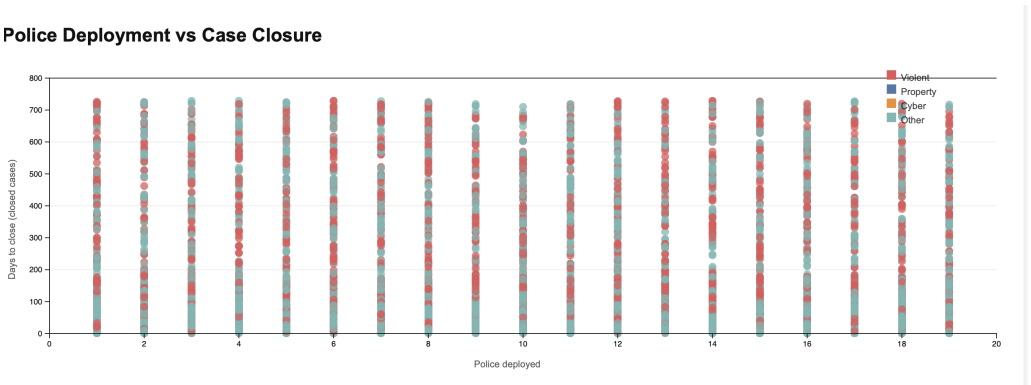

Figure 2: **Resource Efficiency Scatter Plot.** This complex chart plots *Police Deployed* (x-axis) vs. *Case Resolution Time* (y-axis). Colors encode the crime domain (Violent, Property, Cyber, Other), and the interactive legend allows for domain-specific filtering.

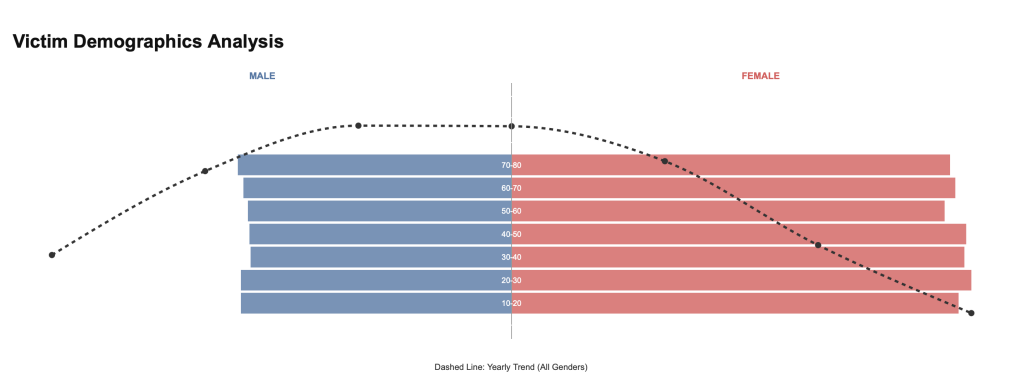

Figure 3: **Dual-Axis Demographic Analysis.** A custom dual-axis chart combining a population pyramid (bars, left axis) for gender distribution with a trend line (overlay, right axis) for age analysis. This required synchronizing two independent y-scales.
